

1.) What's My long-term goal?

I aimed to be the better version of myself in the long run. I never had the opportunity to learn everything needed for the industry by just attending school. This is the only opportunity that I believed will help me and my needs for me to be industry ready professional.

Specific – I will continuously study things related to the course that I am working for

Measurable- I aimed to dedicate a time to learn things at least once per week

Achievable – I will look for some other references to study more about the topic

Relevant – I will study all the necessary topics to keep me engaged and stay relevant

Timely – I will do a short project at least a month to put everything on a test

2.) What's my learning rhythm?

I gave myself a time to learn. After my work or any long activities within a day, I gave myself a little rest, I keep myself at peace before I learn something. I take down notes and review every time I have to and for me to be trained.

Specific – I will study all the topics related to the track that I am studying for

Measurable- I will a lot at least an hour of my day to study

Achievable – I will download various learning materials on my devices

Relevant – I will just study a topic that is intended for a day to study

Timely – I will continuously do it until I understand where and when to use what I have learned

3.) How will I handle frustrating moments?

I give it a time. We are in a learning process. We give it a time and patience. Rome wasn't built in a day and so is our learning. We should learn to accept mistakes, we cannot be one-hundred percent consistent all the time. Everything's in a process. Everyone will undergo with it.

Specific – I will be patient on learning things

Measurable- I will limit myself not to stress on a particular problem

Achievable – I will be calm and try my best to understand the problem

Relevant – I will do my best to research about the problem and not to stress it first

Timely – I will be patient and will take a rest if I find things no longer working, I'll give myself a time to rethink and come up with another option of solving it
